- added features like sort, filter, etc.

PERSONAL PROJECTS

- **Ecom.in** : It is a fashion e-commerce website that was created using React and Redux. To achieve this, I used React's component-based architecture and Redux's predictable state management to create a dynamic and responsive website that is easy to navigate and use.
- **Image Searching** : This is a website that allows users to search for images and view the results. The website retrieves the images from the Pixabay API and displays them in a grid.
- **Weather forecast App**: The Weather Forecast is a web application that provides users with real-time weather information for a given location. The app utilizes the OpenWeatherMap API to retrieve weather data and displays it in a user-friendly way. It is Created using Html,css and javascript
- **Task App**: The Task App is a user-friendly productivity tool designed to users for their daily tasks and to stay organized. Built with React and Framer Motion library for animations, the app provides a seamless and interactive user experience. With the Task App, users can easily create and prioritize their to-do lists. The app's intuitive interface allows users to add new tasks quickly and efficiently.
